Abstract:

In this talk, I introduce network standpoint epistemology, a research program that uses tools and methods from network epistemology to study claims from standpoint epistemology. I discuss a few projects that use network models to make precise several mechanisms by which the socially marginalized can obtain a number of epistemic advantages, in virtue of their position.

(The talk is organized as part of the project Feminist philosophy of formal logic at the Institute of Philosophy, Zagreb.)

Nove teme u filozofiji logike i spoznaje, Serija predavanja

Jingyi Wu (London School of Economics): *An Invitation to Network Standpoint Epistemology*

Datum i vrijeme: 30. 10. 2026, 11:00 CET

Predavanje će biti održano na engleskom jeziku.

Sažetak:

U ovom izlaganju predstavljam mrežnu epistemologiju gledišta, istraživački program koji se koristi alatima i metodama formalne mrežne epistemologije za proučavanje tvrdnji iz epistemologije gledišta. Razmatram nekoliko istraživanja koja primjenjuju formalne mrežne modele kako bi omogućila precizan opis mehanizama pomoću kojih društveno marginalizirane skupine, zahvaljujući svojem položaju, mogu steći niz epistemičkih prednosti.

(Predavanje je organizirano u sklopu projekta Feministička filozofija formalne logike na Institutu za filozofiju.)
